Mobile Communication

The exchange of information between mobile devices using wireless networks

Key Features

- Voice calls
- Text messaging (SMS/MMS)
- Video calls
- Instant messaging

Technologies

GSM, 3G, 4G, 5G, WiFi, Bluetooth

Primary Purpose

Connecting people and enabling real-time conversations

Examples

Phone Calls | WhatsApp | FaceTime | Telegram | Zoom

Mobile Computing

Using portable computing devices to access, process, and store data anywhere

Key Features

- Data processing
- Cloud synchronization
- Mobile productivity
- Location-based services

Technologies

Smartphones, Tablets, Wearables, Mobile OS (iOS/Android)

Primary Purpose

Computing on-the-go with portable devices

Examples

Mobile Banking | GPS Navigation | Mobile Gaming | Google Docs | Photo Editing

Modern Convergence

Today's smartphones seamlessly combine both communication and computing capabilities

Video Conferencing

Teams, Google Meet combining communication with screen sharing and collaboration

Cloud Collaboration

Real-time document editing with chat and messaging built-in

Mobile Payments

Processing transactions while communicating with merchants

Mobile Communication vs Mobile Computing

Understanding the key differences and convergence

Mobile Communication
